

Basic Questions to Spec up a UPS

1. What VA or kW load does the customer require backup for?
2. What runtime does the customer require? (This is the time it takes to gracefully shut down all equipment backed up by the UPS)
3. If 10kVA or below: Tower or Rackmounted?
4. Is UPS monitoring or remote management required? SNMP?
5. If they require a UPS but do not know the answers to questions 1 and 2, does the customer have a kit list? If so, send that to fdrummond@gammaglobal.com and we will get the information you require.
6. Are there any plans for connecting additional equipment to the UPS in the next year?
